❖ Core Measure(s) Reminder Alerts

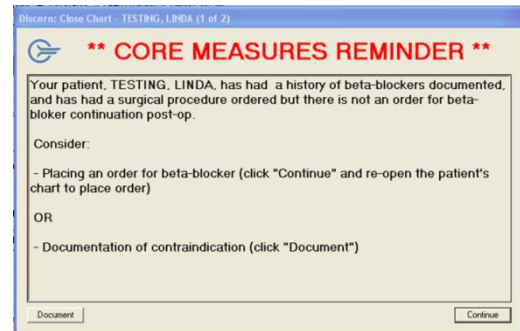

Starting Tuesday, March 26, Clinicians and Providers will see Core Measures Reminder automatic alerts when required Core Measure(s) are missing in the EHR. These are the first in a series of alerts being created to assist with Core Measures fallouts.

There are 2 types of alerts coming in this series:

1. Beta Blocker following Surgical Procedures

For Surgical Patients only:

- For surgical patients, if beta blockers were prescribed prior to admission a ****Core Measures Reminder**** alert will appear if the patient has no order for beta blockers post-procedure.
- The **Provider** will see the alert when **closing** chart.
- The **Nurse** will see the alert when **opening** chart.

Required documentation:

When an alert appears, address the alert:

1. Place an order for the required medication
- or-**
2. Complete the associated PowerForm documenting the reason the medication was not prescribed

<p>Was a Beta-Blocker Prescribed at Hospital Discharge?</p> <p><input checked="" type="radio"/> Yes <input type="radio"/> No</p>	<p>Discharge Medications</p> <p>No qualifying data available</p>
<p>Typical Beta-Blockers Include: atenolol (Tenormin) metoprolol (Lopressor, Toprol XL) carvedilol (Coreg) propranolol (Inderal) nadolol (Corgard)</p>	<p>If a medication is not listed as a discharge medication, and there is only documentation of a plan to delay initiation/restarting of the medication for a time period after discharge, do not regard it as a discharge medication</p>
<p>What is the Documented Reason Beta-Blocker Not Prescribed?</p> <p><input type="checkbox"/> No documented reason <input type="checkbox"/> Allergy <input type="checkbox"/> Heart block, 2nd or 3rd degree without pacemaker <input type="checkbox"/> Other</p>	<p>Documented Reason(s) Beta-Blocker Not Prescribed</p> <p>No qualifying data available</p>

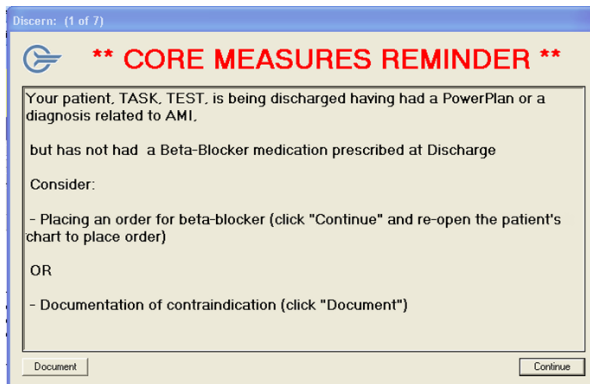

2. Multiple Core Measure Alerts may fire upon Initiation of the Discharge PowerPlan

Acute Myocardial Infarction	Aspirin prescribed at discharge
	ACEI or ARB prescribed at discharge for LVSD<40%
	Beta Blocker prescribed at discharge
	Statin prescribed at discharge
Heart Failure	ACEI or ARB for LVSD<40% prescribed at discharge
Stroke	Antithrombotics at discharge
	Anticoagulation prescribed at discharge
	Lipids drawn, LDL>100, statin prescribed at discharge

New Patient Access, New Processes, New Geography, New Ways to Engage

Discharge Medications Alerts:

Upon signing the Initiation of the Discharge PowerPlan, providers and nurses may see alerts similar to this one:

An additional example of a medication required at discharge. This alert will appear for stroke patients requiring anticoagulation. Order the medication, or document why the medication was not prescribed at discharge.
